

NetFront™ for Series 60

A whole lot of Internet on your mobile phone

NetFront v3.2 for Series 60 is a sophisticated Internet browser for smartphones. It provides quick and seamless access to standard Web pages from a mobile phone.

The new European language pack supports English, French, Italian, German, Spanish and Portuguese phone languages .

To make mobile browsing convenient NetFront offers Smart-Fit Rendering™, a technology that intelligently adapts standard Web pages to the screen width of a Series 60 phone.

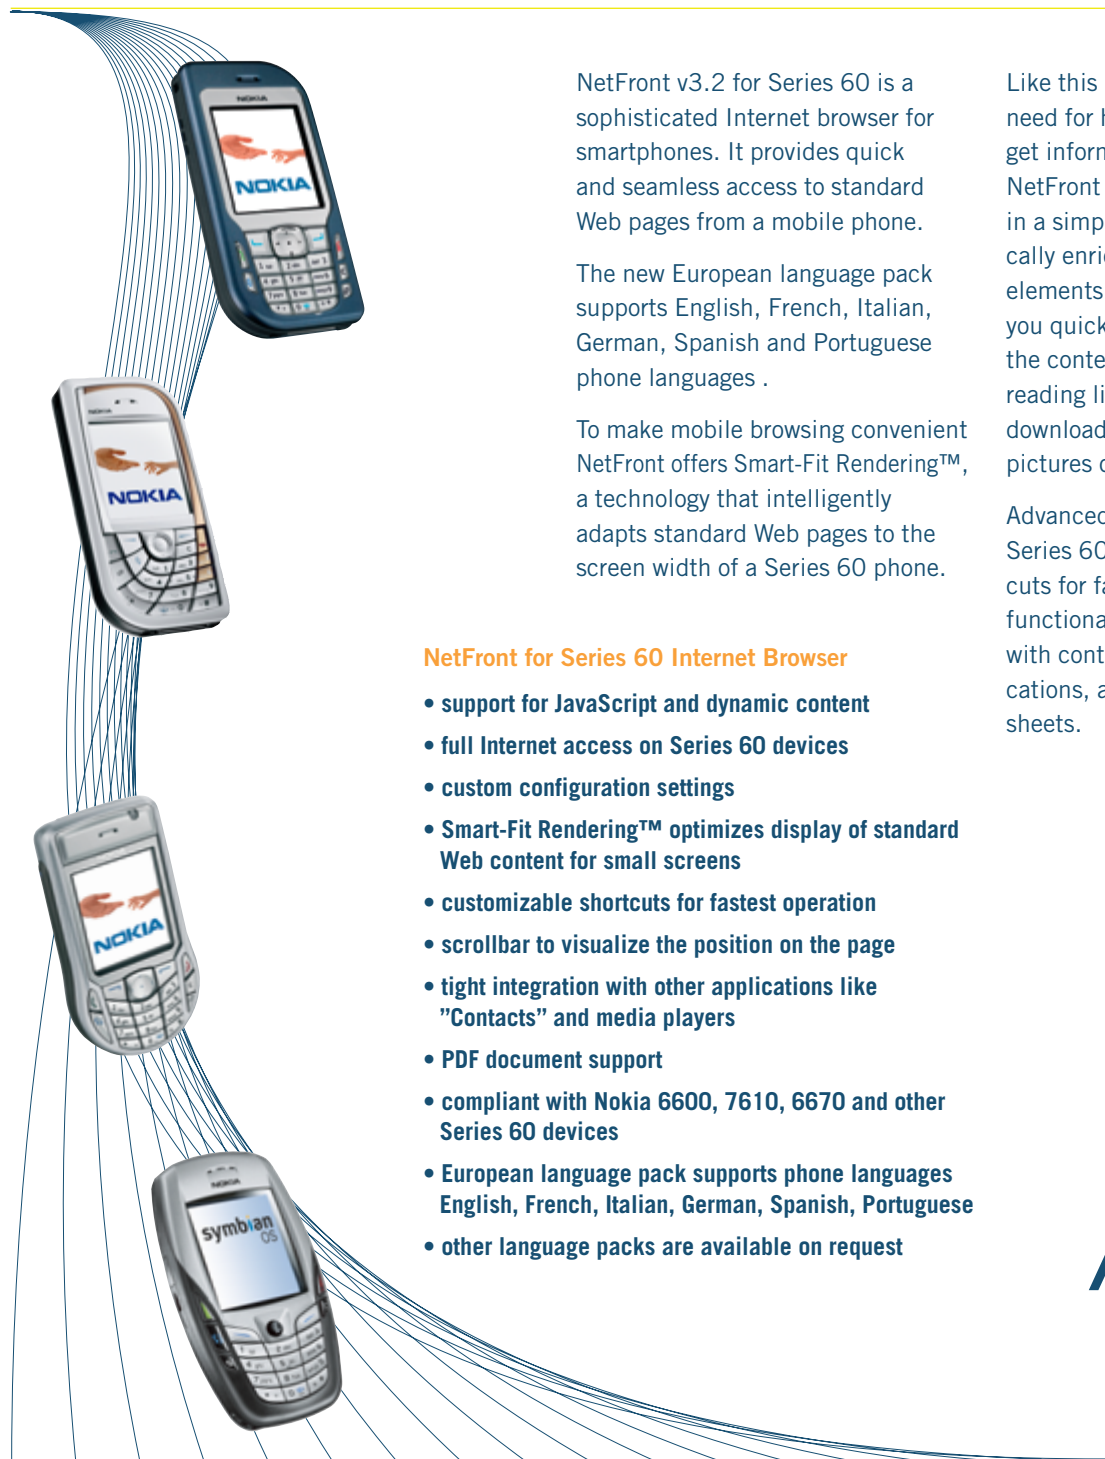

Like this Smart-Fit eliminates the need for horizontal scrolling. To get information as fast as possible NetFront starts displaying a Web page in a simplified format and automatically enriches the layout as more elements get downloaded. This allows you quickly gain an overview about the contents and select further reading links before the complete download of larger objects such as pictures or animations.

Advanced features of NetFront for Series 60 include configurable shortcuts for fastest access to program functionality, seamless integration with contacts and messaging applications, and support for user style sheets.

NetFront for Series 60 Internet Browser

- support for JavaScript and dynamic content
- full Internet access on Series 60 devices
- custom configuration settings
- Smart-Fit Rendering™ optimizes display of standard Web content for small screens
