## NetFront for S60 Internet Browser

NetFront for S60 is a modular, scalable, full-featured mobile browser that supports full Internet browsing and offers the most comprehensive feature set currently available in the market. To make mobile browsing convenient, NetFront for S60 includes unique technologies like Smart-Fit Rendering™, which intelligently adapts standard Web pages to the screen width of a S60 phone and eliminates the need for horizontal scrolling. To get information as fast as possible NetFront starts displaying a Web page in a simplified format and automatically enriches the layout as more elements get downloaded. This Rapid-Render technology allows you quickly gain an overview about the contents and select further reading links before the complete download of larger objects such as pictures or animations.

NetFront provides S60 mobile professionals with a fast and powerful mobile Internet browsing experience and advanced features like configurable shortcuts for fastest access to program functionality, seamless integration with contacts and messaging applications, and support for user style sheets.

**New features in NetFront v3.3** are an intelligent Pop-Up Blocker, RSS/Atomfeed support, web data and password manager, multiple browser windows, and improved DHTML support.
